Dr. Marie-Claude Tremblay, MD, CCFP — Permis CMQ 00-99881

CONSULTATION REQUEST — DIVISION OF CARDIOLOGY, MONTREAL CHILDREN'S HOSPITAL

Date of request: 2026-07-20

Patient: Gabriel Fortin (M) **DOB:** 2021-03-14 (age 5)

RAMQ: FORG 2103 1499

Parent/guardian: Julie Fortin (mother), 514-555-0177

Address: 4210 rue Masson, app. 3, Montréal, QC H1X 0B0

Priority: C — to be seen within 3 months (asymptomatic, no red flags)

Reason for consultation: Assessment of newly detected systolic murmur.

History: 5-year-old boy, previously healthy, seen for routine pre-kindergarten visit. Incidental finding of a grade II/VI systolic ejection murmur, best heard at LLSB, no radiation. Murmur softens with standing — likely innocent (Still's), but parents anxious and no prior documentation of murmur. No syncope, no exertional dyspnea, no cyanosis, no palpitations. Feeding and growth normal (wt 50th %ile, ht 60th %ile). No FHx of congenital heart disease, sudden cardiac death, or cardiomyopathy. Term birth, uncomplicated.

Physical exam: BP 96/58, HR 92 reg, sat 99% RA. Precordium quiet, normal S1/S2, no thrill, femoral pulses 2+ bilaterally and symmetric. Lungs clear. No hepatomegaly.

Investigations: None to date. ECG requisition given (results to follow if done before appointment).

Medications: None. **Allergies:** NKDA.

Question for consultant: Kindly assess murmur and confirm whether echocardiography is warranted, or reassure family if clinically innocent.

Merci de votre collaboration,

Dr. M.-C. Tremblay
